TITLE : IMAGE RECORDER

ABSTRACT : PROBLEM TO BE SOLVED: To realize high printing density and to reduce a vertical stripe image due to variation in a light quantity of an LED without densifying the LED itself.

SOLUTION: The quantities of emission lights from two LED elements adjacent to each other are controlled to be synthesized and the positions of the emission lights are varied so that the printing by the resolution greater than an arrangement interval of the LED elements can be realized. The lowering of the quantity of the emission light from one LED element is compensated by the averaging by virtue of the synthesizing with the other so that the influence can be reduced.
